

CL203: Database Systems lab

Lab Task 09 [View, DCL]

Before doing the task I recommend you all to go through the manuals [views, DCL] and log file [DBLab_log_09 [Views & DCL].md] I shared with you on slate. It will make it easy for you all to understand this.

Submit: Submit me a log file containing query and its output. Make sure you marked each query properly with its query number.

1. The Theme Park managers want to create a view called EMP_DETAILS which contains the following information. EMP_NO, PARK_CODE, PARK_NAME, EMP_LNAME_EMP_FNAME, EMP_HIRE_DATE and EMP_DOB. The view should only be read only.
2. Check that the view works, by displaying its contents.
3. Using your view EMP_DETAILS, write a query that displays all employee first and last names and the park names.
4. Create a user , user name should be your name
5. Grants privileges to the user you created
 - To access tables from database themepark (at least 1).
 - To access the views have created (at least 1 view)
 - To create a database
6. Create another view using any table and insert the data in the view you have created.
 - See the output by running select * from the view and select * from the table you have created view from.
7. Revoke the right to create database from the user you created
